Pindrop® Trace® correlates account activities across calls and analyzes relationships between seemingly unrelated data to find and prevent more fraud, faster.
How it Works

Siloed data leaves unfound clues that could have been used to stop fraud before it happens. Connect all of your data with Pindrop Trace. This patent-pending analytics engine powers Protect's account risk scoring, identifying the most complicated fraud scams, and predicting cross-channel fraud up to 60 days before it takes place.

This gets more complicated when you look at millions of calls. Pindrop does this at scale.
